

Wesko Rear Anti-Tip System

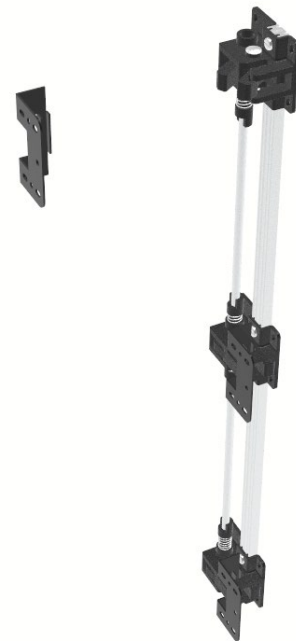

Features

- Anti-tip solution for undermount slides, soft close slides, drawers without slides or where there is insufficient space on the sides of the drawers.
- Rear anti-tip mechanism is mounted in the gap behind the drawer box – 1¼" gap is required.
- Mechanism is activated by a latch mounted on the rear of the drawer box.
- As one drawer is opened, connecting bars are blocked and all remaining latches are locked.
- Supports 50 pound pull force.

Options

- One-piece assembly is produced to customer specifications with components installed on aluminum channel.
- Components are available as a kit with or without the aluminum mounting channel for installation directly on rear panel.

Benefits

- Provides rear mounting anti-tip where space beside drawer box is restricted.
- Component kit provides unlimited mounting options.
